

herkules Fans™

Move Air the Right Way for Energy Savings!

Ceiling mount to move air sideways, not down. It's that easy.

INDUSTRIAL / COMMERCIAL

QUIET BLADE DESIGN

LONG LIFE

24/7 OPERATION

COMFORT

LOW ENERGY

EASY INSTALLATION

LOW MAINTENANCE

**3-POINT

3-POINT**

**TRUSS MOUNTING KIT TO
VERTICALLY MOUNT THE
FAN FOR HORIZONTAL AIR
FLOW**

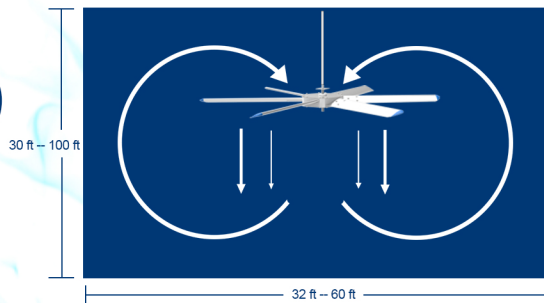

Why Herkules Fans are so Effective:

- One 7' high volume, low speed (HVLS) industrial fan moves air over 300 feet
- Mounted to flow sideways, multiple HVLS fans work together in larger buildings to create circulation that provides cooling airflow in summer and moves warm ceiling air down to floor level in winter
- Low maintenance sealed, direct drive motor
- 7' fan weighs less than 45 lbs simplifying installation; compare to 300+ lbs for gearbox driven models
- Fans work together to move air using fewer fans and much less energy than conventional downward facing ceiling fans
- Free plant layout review to suggest optimal fan locations

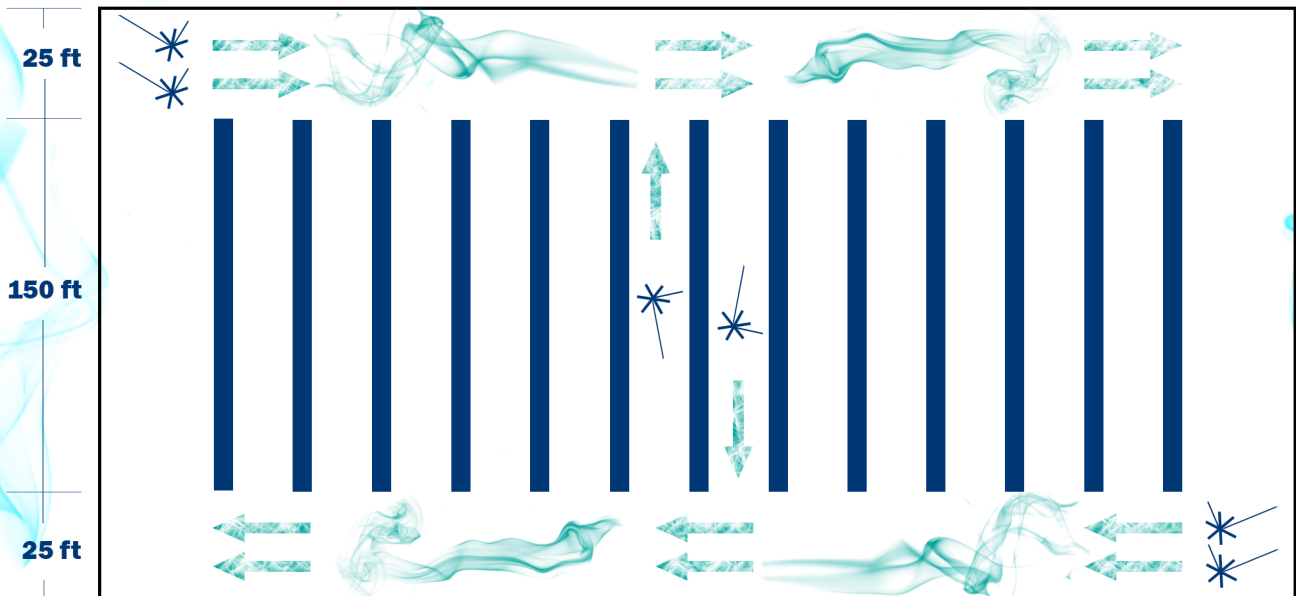

Specification and General Information

<p>Motor</p> <p>90% Efficiency; Sealed Direct Drive</p>	<p>Power Consumption</p> <p>10-350 Watts (Variable Speed)</p>	<p>Standard Input Power</p> <p>208V - 220V, Single Phase</p>	<p>Mount Type</p> <p>Ceiling - 3-Point Chain Mount</p>

<p>Controller On / Off; Push Button Operated. Speed Control. Attaches to Wall / Post.</p>			

OLD
Traditional Style

A traditional ceiling mounted fan must work against gravity, so it is generally **HEAVIER** and requires **MORE POWER**. It also does not work in conjunction with other fans so **MORE FANS ARE NEEDED** for effective air movement.

The diagram shows six Herkules 7 ft vertical, tri-pole mount ceiling fans (Part # F0004) placed within a large facility for maximum air flow
